

MOBILE APPLICATION DEVELOPMENT

WEEK 1

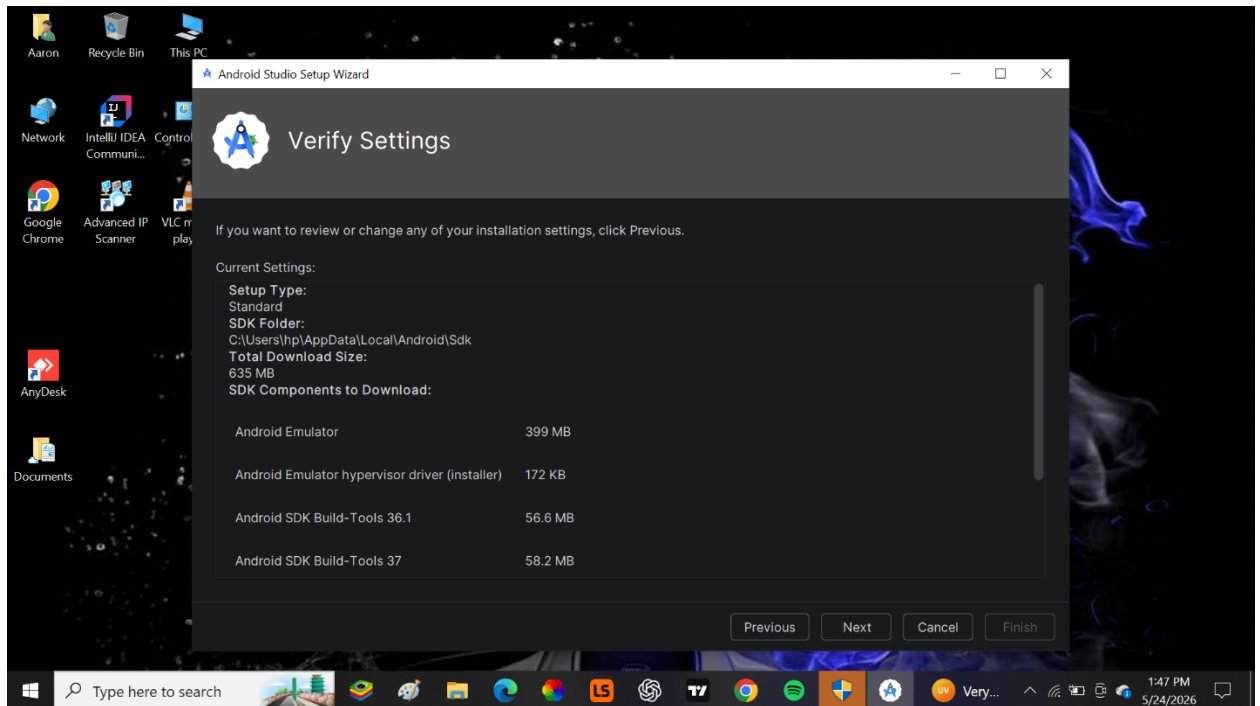

Objective: To set up mobile development environment and create a simple flutter application.

Activities completed.

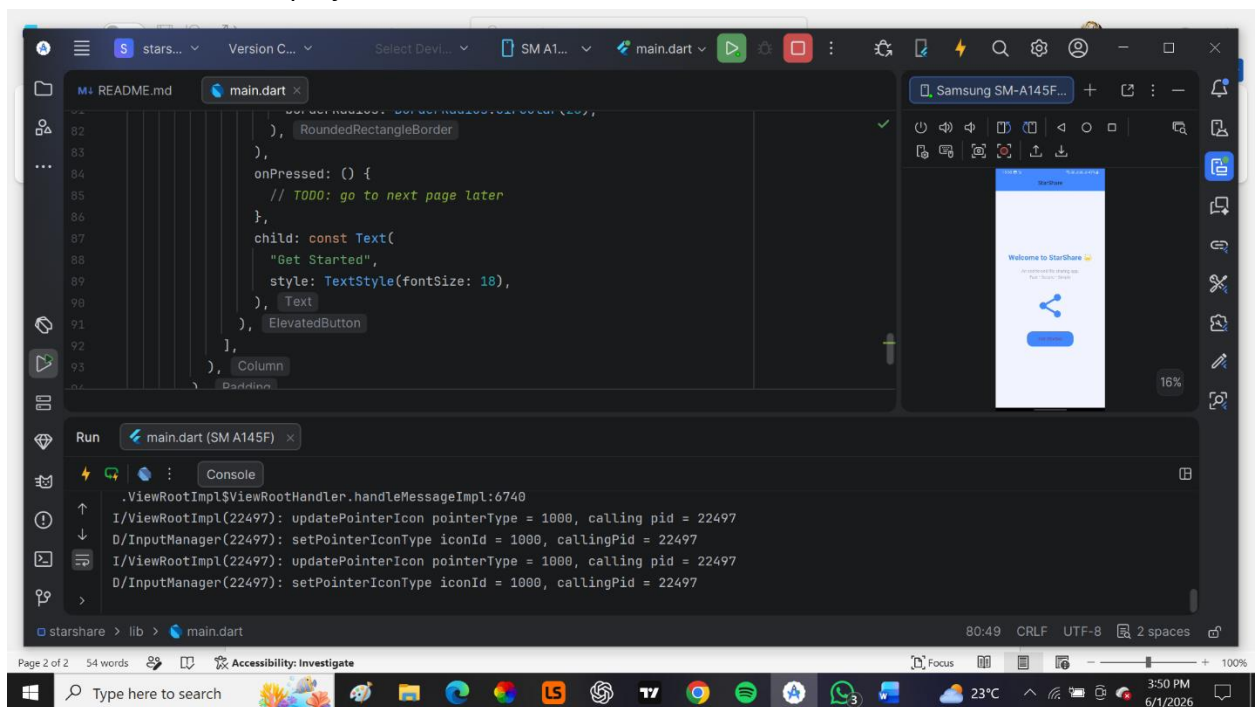

- Installed Android Studio.

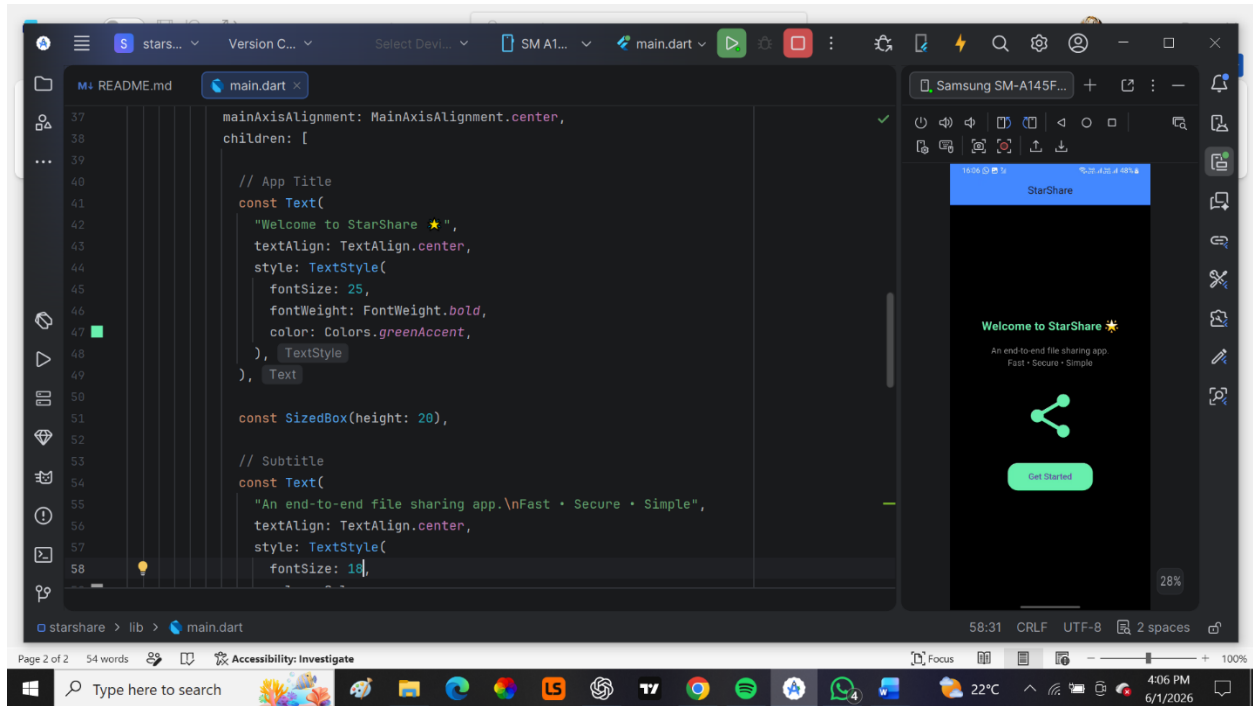

- Configured Android SDK and Emulator and Verified development environment.

- Created a new flutter project.

- Modified the application title, changed the background colour and adjusted the font size of the application text.

Tools used:

1. Android Studio
2. Flutter SDK
3. Android Emulator

Reflection:

This week provided practical experience in preparing a complete mobile development environment. I gained better understanding of Android Studio, Flutter SDK installation, emulator configuration, and application execution.

Objective: To create wireframes in Figma to represent the structure of application screens.

Figure 1: Onboarding Screen Wireframe.

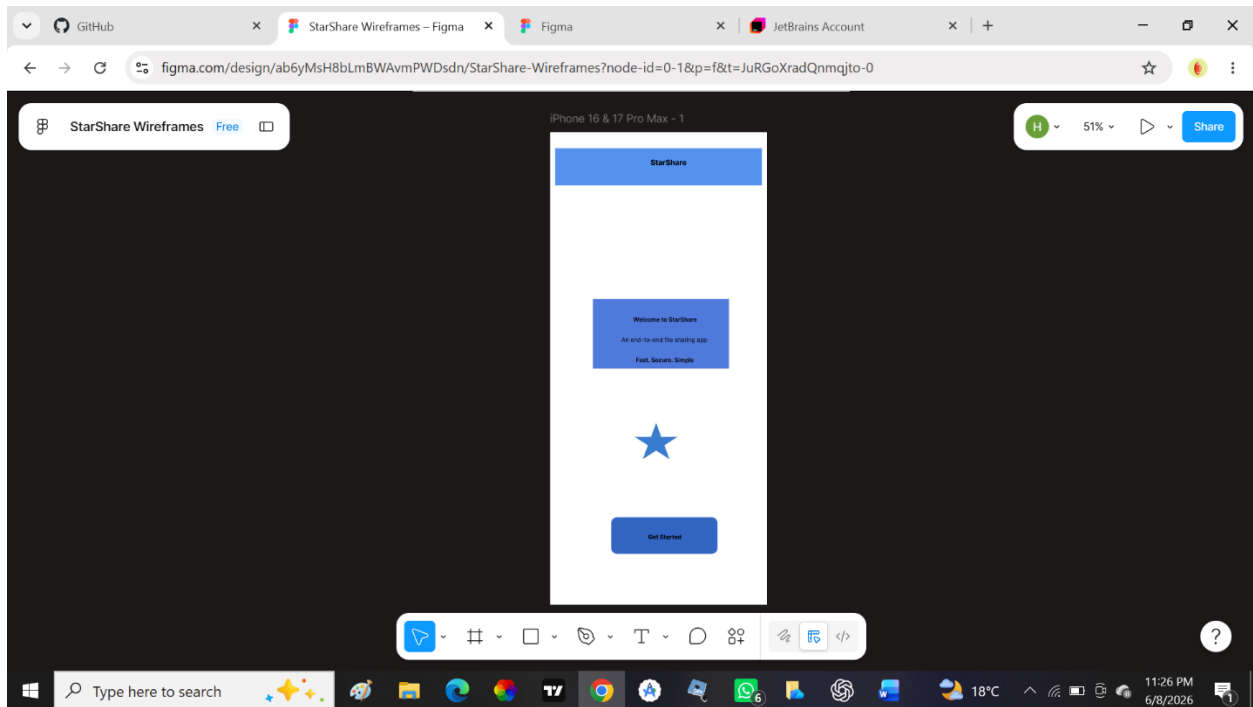

Figure 2: Splash Screen Wireframe.

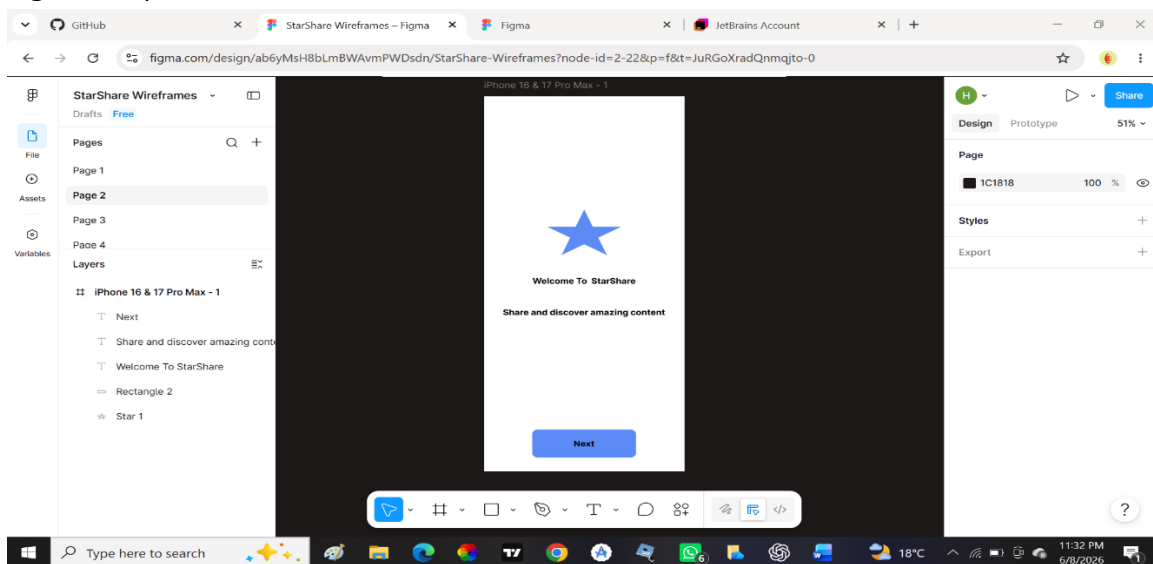

Figure 3: Login screen Wireframe

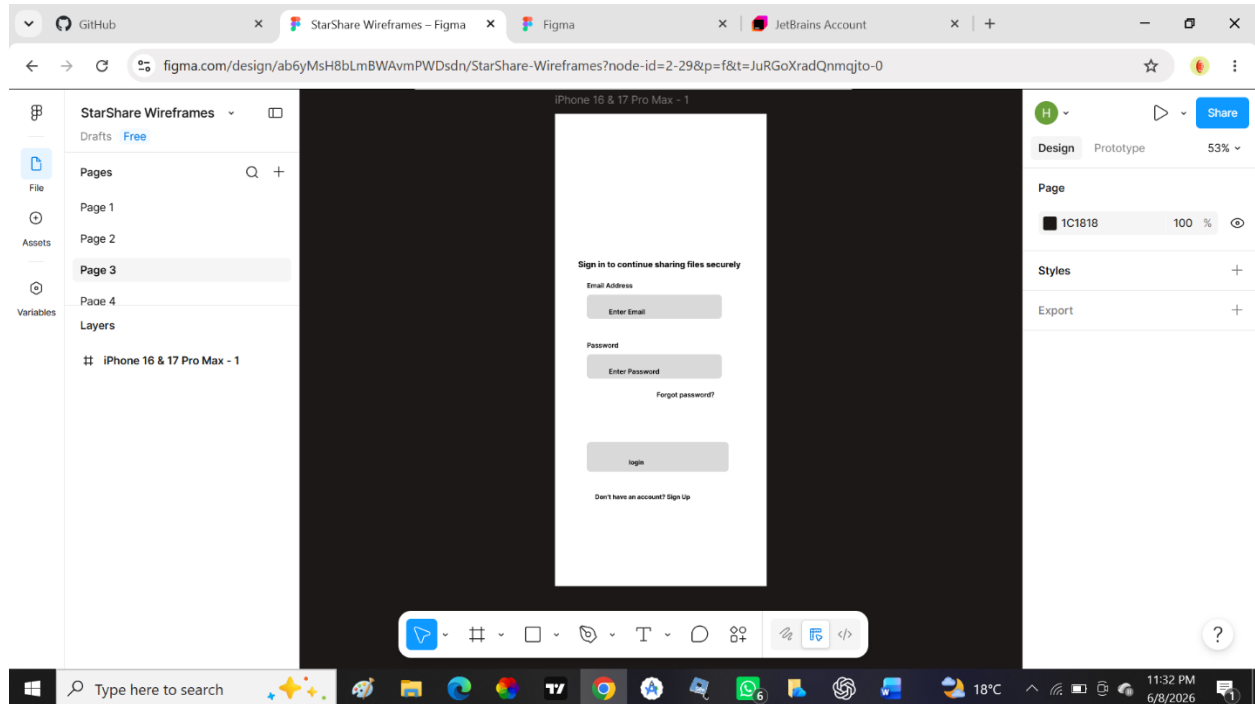

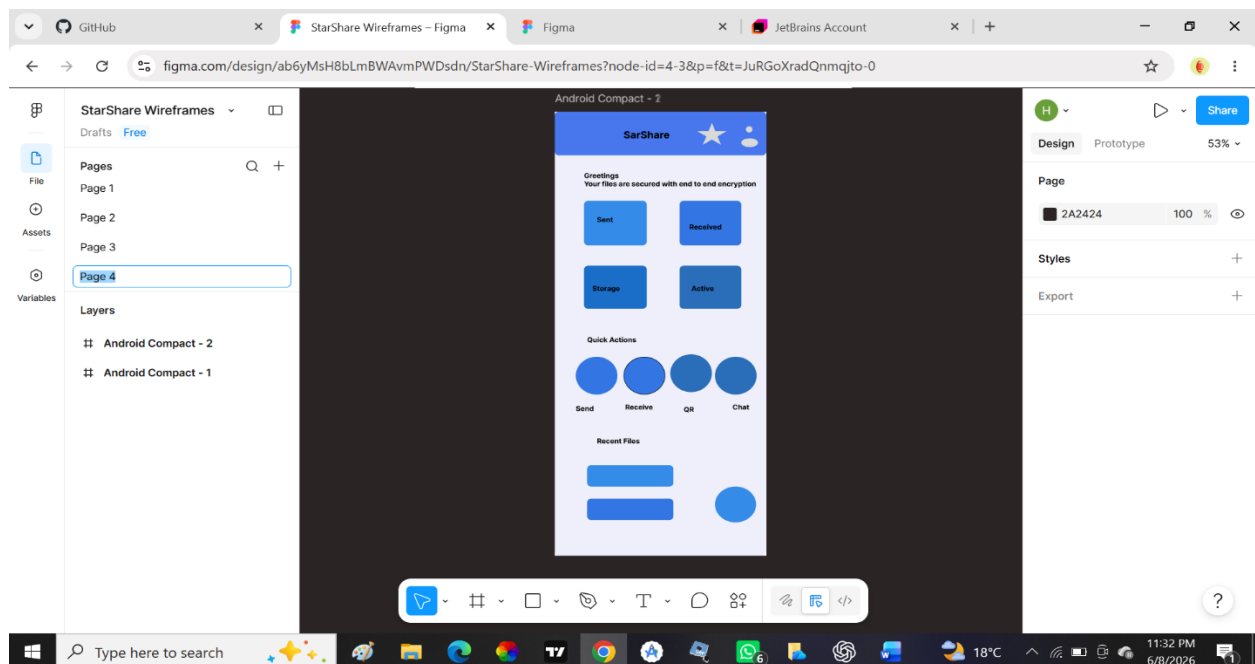

Figure 4: Home Screen Wireframe

Tools used include:

1. Figma (for wireframing and UI design)
